

Fronius IG TL

Transformerless PV inverter with standard system monitoring

System monitoring with the Status Manager comes standard with the Fronius IG TL. This includes string malfunction detection, detailed status codes as well as a direct signaling contact. The Status Manager immediately reports any problems throughout the entire system thus locking in system yields for the long-term. It also has a unique feature in which a commercially-available USB stick can be used for easy system monitoring as well as simple inverter updating. Get plugged into the future!
